**Capture Business Cards Completes Partnership Contract with
AmazingPrint Corp.
Pioneer in Web-to-Print Procurement Solutions Is First To Offer Capture Cards to
Online Customer Base**

Minneapolis, Minnesota (April 3rd, 2007)—**Capture Business Cards LLC**, a leading innovator in business communication solutions, today announced the completion of their partnering contract with **AmazingPrint.com.**, a pioneer in web-to-print procurement solutions. The contract gives AmazingPrint.com the rights to provide the web-based design and ordering solution for Capture Business Card products. In addition, AmazingPrint's web-to-print software, known as eCard Builder software features a customized online interface specifically tailored to Capture Card's innovative, multiple labels format. AmazingPrint.com will also promote the Capture Business Card product line while further establishing itself as a leading provider of web-to-print and communication services for the print industry.

“The next edition of AmazingPrint's eCard Builder software is the perfect fit for Capture Card's unique labeled business cards,” says Emma Zumberge VP of marketing, PR and Business Development for Capture Business Cards. “We are really looking forward to bringing Capture Cards to the design on-line market. We believe eCard Builder's easy to use interface and extensive image library will provide our customers the flexibility and options they need to create a fully customized and functional business card.”

Capture Card takes regular weight business cards and through a patented manufacturing process, adds removable adhesive labels to the back of the card stock. These labels can be printed using conventional offset or digital printing equipment and can include a simple type-based message or a printed photograph. Popular applications include appointment

reminders, notes, marketing messages, promotions, coupons or additional contact information. The card can be printed with any type of information that effectively communicates whatever the customer desires. A choice of permanent or repositionable adhesive labels is also available.

“The addition of Capture Cards to our list of available printed products through the eCard Builder interface gives our subscribers the most comprehensive catalogue of options to offer their customers, said Slava Apel, CEO of AmazingPrint. “The availability of Capture Cards exclusively through the eCard Builder design-on-line interface will give our clients an edge on all the competing print sites.”

About Capture Business Cards

Capture Business Cards is a leading innovator of business communication solutions. Their flagship product, Capture Card, is the first of its kind in the burgeoning US 1.2 billion dollar business card market. Capture Card enhances the often-overlooked backside of a business card with the addition of customizable labels. The pairing of premium stock with quality removable labels result in a more functional promotional and communication tool.
